Introduction

In order to overcome theft and threatening some control measures such as issuance of gun license demanding gentry led to dimension of keeping individual gun licensee and possession of weapon as basic right. Now, situation has become something beyond control as there occurred indiscriminate gun shooting in one part or the other in the United State of America [1]. As such there was no any pragmatic measure to overcome this tragic situation, which became matter for pondering. And posing problem of open challenge for finding practical feasible solution. The situation needed deep thinking on what to do and what not to do about such bad developing scenario not merely in the U.S.A [1], but all global countries, in general. Objective of this study was to fix process and find out appropriate genetic control measure and socio punishment. The indiscriminate gun shooting as a mental disorder, for which a bio factor has been identified. It needs fixing categories of mental disorder induced bad personality character and their inherent bio factor. Such bio

Abstract

With time severity of crime as well as modality and numbers of cases have taken un imaginable scenarios. The worsening situations create worry about what to do and how to do, in indiscriminate gun shooting in U.S.A. and elsewhere in the worldly countries. This study identified bio-factor which builds magnified bad personality. The bio-factor quantum increases prompting the bad personality, the criminals go on intensifying heinous crime because it takes form of mania. Severe cases on prevailing topic in audiovisual media were cited so that situation gets easily comprehended by the readers. Live in relation is globally getting regulated. Ayurvedic science the nature of ailments are deemed to be *vaat*. Such ailments need moderation of angularity in bad manias of would be couple to revert back to normal personality, where social measure. The study came with social punishment so that the bad punished personality criminals remain as a real moving model exemplifying the crime and social punishment to get social humiliation for one self and onlookers take lessons to restrain from involving in such anti social activities. The study, in addition to identification of bio factor, attempted to fix categories of criminals and their interrelationship with various crime levels and features creating opportunities to implement reforming measures for their improvements. Thus, this study created a novel genetic-socio measure for overcoming crimes as a new visionary initiative.

Keywords: Bad personality-criminals; Bio-factors; heinous crime, Judiciary; Mental disorder; Prison and Social punishment

factor induced can be overcome by giving minor to major sociological punishment such as not giving gun licence, punching in ear to shredding of one's ear so that such bad personality person serve as a live moving model for people to see, understand, restrain from doing such heinous crimes, that will form a personal social punishment. This will form a pro-social governance making people learn lesson and not to get indulged in such heinous crime or misbehavior. Thus, people, resources, assets and energy will get saved, which will bring all round development of countries at global level.

Materials and Method

The Problem Dimensions

This is a problem of general nature having vast domain, which can come to realization once cases emerge and come to notice. The numbers of such bad personalities come in agglom-

erations, as bad society attract such like mind people. Thus cases are seen in plenty, these days. For example, large numbers of online scams and digital frauds coming and prevailing these days. Governments' have made many compulsions of linking personal details with bank accounts keeping people under pressure of ignorance. There would have been better way to let people understand the new introduction and get familiarized. The Governments should have perfected the system so that the fraudulent activities get combated. In absence of such realization the numbers and domains of bad personality development have taken shape of ocean like situation.

Identification of Bio-Factor

In the xx-xy (female-male) gender theory bio-factors were identified which led to development of aberrations in the expected results of the scientific theory discovered in 1905, by Wilson and Stevens about one and a quarter century ago [2]. Further, deep study of different categories of cases led to conclusion, where mental disorders appear and go on progressing. As this bio-factor increases the severity of bad qualities also go on increasing. Study has covered all such details of cases and nature of developing crime [3].

Possible Solution

The bad personality development takes broad spectrum depending on any shock during situation the individual had been a child with zero mental power. This situation defers growth and bio-factors develop strongly to acquire bad form of a mania, which become extremely severe character of bad personalities. Supplementing details will be coming up in the result and discussion part of the study.

Acquisition of Data for the Study

Data on xx-xy gender theory classified under different categories and implications were drawn from study on perfection of the first discovery in and beyond [3] on child development from zero to hero. The bio factors detailed study for long past, well known personalities was drawn for the study [3] were further studied. The bad personality invaded manias were coming up in plenty in media. Such unanimous case characters were sufficient for exemplifying this process based study.

Deep studies of well known cases reached identification of conformatory biofactors and historical cases supplemented situation and fortification of shocks and impact on biomagnifications at later times in life courses [3]. The cases of mania driven actions were referred as supporting evidences of mental disorders. Apex court judgment, which came during the ongoing review process, added further confidence and surety of results arrived in the study.

Results

Bio Factor Identified from Aberrations in Female-Male Gender Theory

Cases presented in Table 1 showed that 2 cases in the category revealed that ailments on parents was that father of one son suffered baldness and mental disorder. Cases having two sons revealed remarkable conclusion from 8 case studies that ailments on parents was that fathers suffer baldness, migraines and mental disorder and mothers suffer mental disorder even death at an early age. Any skeletal disability gets reflected in child gender developments on increasing in amplitude that both the children were sons, which come with high pH. This

confirms that pH range is important bio factor. Remarkable conclusion from the two case studies having three sons showed that ailments on fathers suffer baldness as well as severe headache. Remarkable conclusion from the study of one case having four sons revealed that father suffered baldness and mother suffered mental disorder. Thus, high pH is important factor for birth of gender balanced family also accompanied by ailment of baldness, mental disorder for father as well as mother.

These were cases well known to the author, which have actually occurred as a results of aberrations in results of well known xx-xy (female-male) gender theory discovered around one and a quarter century ago [2]. People were forgetting the theory and seeking merely God's grace for blessings. Author had brought perfections in the referred theory and such studies have been getting conducted under beyond [3]. which deals with development of good personality. The present study was in contrast of good peonality, which get build up by aberrations, affected by shocks during early stage when mind remains at zero level of thinking, taking profound bio mangnification in form of bad personality. This genetic natural process cannot be built for purpose of fulfilling need of statistical design. Therefore, the process based study get sufficiently substantiated by sample case studies, as accomplished in the present study. Thus, this is a process based study which is not possible to produce cases, under such intricacies the present becomes innovative research.

The Identified New Bio-Factor of Broaden Mental Disorder

Previous sections dealt with bio-factors, effect of any shock and deferment of growth and after over compensating build of mental growth making heinous crimes, diversion of minds and acquiring some specific skill. This fact was exemplified by tremendous enhancements of memory power of Soor Das Ji, who wrote Shri Krishna Gatha. This section is devoted how magnification grows in creating bad personality due to mental disorder. This situation is indicted by range of pH viz urine pH (Table 2). This ranges from 5-12, safely can be considered as 5 to 10. This pH will go on developing bad personality and the hero will behave differently in developing severity of pH ranges. This can be easily fixed by conducting tests of cases of pH of different types of crimes for which one is put in prison. Thus, their already known behavior trend can be correlated with pH. This relationship graph will become ready beckoner for fixing type of bad personality.

Classification of Bio Factor in Relation to Level of Crimes Done by Bad Personalities

Many extreme mental disordered bad personality people need punishment which should keep them reminding the bad activity done by him. In many countries death penalty is banned and life imprisonment is granted in one course of judiciary or the other. Further, the life imprisonment is for 14 years or so and the maintenance of law and order being a state subject, criminals get bail and finally get free from such heinous crimes. The social punishment will serve two aspects; first make the criminals not to do any bad revengeful action after one is out of jail from one or other pretext. Second the social justice granted bad personality will be moving live example for people, in general, to look and learn lesson for restraining from indulging in any heinous crime. Both the aspects will make strong bond of social punishment for any heinous crime.

Information on mental disorder can become a guiding factor of keeping different category of criminals in different cat-

Table 1: Misbalance in family having only male children.

One male and one female with natural developments producing only son						
S.No	Male	Female	Living standard	Offspring	Health of parents	Social implication
1	M21	F24	Normal	1 Son	Male had bald head	It becomes signal that the offspring will be Son
2	F22	F25	Normal	1 Son	Male had some mental disorder	It becomes signal that the offspring will be Son
Remarkable conclusion from the above case studies: Ailments on parents: Father suffer baldness and mental disorder						
3	M13	F16	Normal	2 Sons	Male with migraine	Needs ameliorative measures
4	M14	F17	Normal	2 Sons	Female suffered mental disorder	Needs ameliorative measure
5	M16	F19	Normal	2 sons	Male bald head ,Female died at early age	Family could not provide continued mother care.
6	M17	F20	Normal	2 Sons	Female suffered severe disease	Needs measure to overcome disease
7	M18	F21	Normal	2 Sons	Male suffered season change disorder	Needs measure to overcome
8	M19	F22	Normal	2 Sons	Male suffered baldness	A prospecting impact indicator to follow.
9	M20	F23	Normal	2 Sons	Mail sufferd with left hand paralysis	This is new fact found in this study
10	M21	F 24	Normal	2 Sons	Male had baldness	Confirming baldness
Remarkable conclusion from the above case studies: Ailments on parents: Father s suffer baldness, migranes and mental disorder and mothers suffer mental disorder even death at an early age. Any skeletal disability gets reflected in child gender development.						
11	M11	F14	Normal	3 Sons	Male had severe headache	Needs ameliorative measure
12	M12	F15	Excessive non veg eating	3 Sons	Male with baldness	Covering head with <i>gamchha</i> turbon
Ail Remarkable conclusion from the above case studies: ments on parents: Fathers suffer baldness as well as severe headache						
13	M15	F18	Normal	4 Sons	Father suffered baldness and mother suffered some mental isorder	Needs measure to overcome problem
Remarkable conclusion from the above case studies: Ailments on parents: father suffer baldness and mother suffer mental disorder						

*Subscripts M and F are arbitrary. They merely signify different identification in array.

egories. Such scenarios can be overcome by manoeuvring of pH by food and nutrition, especially when the magnification is of small magnitude. There have been tremendous numbers of cases which take the form of mania thereby what one sets doing on repeatedly. For example in many murder cases criminal is seen continuously repeating his crime in extending order Such situation is found even in famous Tihar jail in Delhi in presence of police standing at site, where one prisoner goes on killing the other prisoner even after death. This situation takes form of severe crime. Aspect is that under the socio punishment one will get socially humiliated and onlookers will also learn lesson reminding that one should obstinate from such bad behavior for which criminal had been given the type of social punishment. The social punishment can be of type of making hole in ear or and shredding of ear or something of that like punishment. This bio-factor will be guiding factor in overcoming of indiscriminate shooting in the U.S.A [1]. and elsewhere, for which there exists no pragmatic control measure. Such identified personality may not be given license for owning the guns.

New Curative Resolution for Overcoming the Extremities Devastated Mental Disorder

Mental Disorder

Previous study on misbalance in gender theory results and their categorization (Table 1) showed valuable information on the health of parents. Such displays of ailment were possible in detail in case of parents, having one to four sons and no female children birth in such families. The occurring ailments were head baldness, migraines, severe headache and developing severity of mental disorder more in fathers than those in mothers. Sparingly, cases of mental disorders were also noted in mothers as well. There occurs headache, severe disorder of pains

compelling people resort, in respect of magnification of bio-factors, taking shape of severity. Sufferers resorts to take simple measure which could appear as a sign of fashion eg keeping beard, keeping long hairs, then extending *chandani* lape, long hair adopting medication, involving deep thinking. Further, severity makes the patient acquire bad mania to commit crime including murders or indiscriminate gun shooting. Crushing of head, cutting of corps in to pieces, grinding, throwing in gutter or throwing the parts in untraceable sites viz forest or water bodies, which were found in love jihad cases.

The severity of the criminal temperament increase with increasing level of indicating bio factor, pH. Psychologists recommend a mental vitamin of spiritualism [4]. The case of mania set back impact was also depicted by case reported [5] where one friend kills even after normalization of situation of dispute. This implicates that any mental disorder after some pacification and moderation cannot be granted as cured ones as cycle of bad situation can revert and compel such criminals commit any level of crime.

Likely Cares of Genetic Socio Character

The bio-factor is responsible for causing misbalance in family gender, which became a new scientific fact. The ranges display that its levels have strong impact on mental health or disorder (Table 2). This became clear from new theme food is medicine. Food enables help regulate acidity levels reflected by the pH. Fruits and nuts are the most useful food commodity in regulating the level. The mind gets disturbed at higher ranges with situation when there is some mental shock that defers growth. Such child will acquire mental stage after delayed years, but with profound bio- magnification. Depending on exposure one acquires typical attitude and characteristics, taking form of ma-

Table 2: Bio factor and likely visible disorder and likely genetic soci curative measure.

SNo	pH	Impact	Visible disorder	Likely prevention	Social cure/punishment
1	5	Aberration in gender theory	Head baldness, Keeping head shaved frequently	Maintain head hair	Lack of knowledge led to posing mere a style of living
2	6	Aberration in gender theory	Migraine	Oil and lotion massages	Yoga and meditation
3	7	Aberration in gender theory	Severe headache	Medical Treatment	Yoga+ meditation and becoming sanyasi
4	8	Bio-magnification of bad character	<i>Chandan</i> + keeping long hair on head	Motivation and cure food is medicine	Judiciary
5	9	Bio-magnification of bad character	Mania	Social punishment	Judiciary
6	10	Bio-magnification of bad character	Mania	Social punishment	Judiciary

nia. Such bad personality commits criminal activities, which implicate judicial punishment in practice.

The fact that likely preventions as practiced to keep pain under control, which can be effective under the moderate mental disorder (low ranges of pH indicated in Table 2). Under developing mania as a result of shock and deferred bio magnification, the criminal's mind get governed by mental situation with high range of pH, which commits crimes of repeated action or indiscriminate gun shooting, for which time taking legal justice process take long time, plenty loss of energy, social as well as nonsocial costs.

Use of Bad Intelligence in Running Gangerster Activity through Advanced Technology of Communication

Mania attacked criminal carried out heinous crimes, largely reach in prison. These bad personalities while resting in prison use high tech to administer their activities using advanced technologies such as internet, mobile and skype etc. in India [6]. It came to knowledge from the report of National Intelligence Agency (NIA) that gangsters from Canada, Pakistan and Dubai have established link with similar gangs in India to carryout criminal activities in India. That means bio magnifications in bad personality minds also are building pillar of confrontation for countries.

Discussion

This study has presented valuable data on case study establishing identification of bio-factors and its substantiation cases. It could come up that when shock occur some set back when child is growing in the form of a shock, the growth gets hampered. But as time passes and mind grows during age of 20-25 years, it acquires bio-magnification, which acquires shape of personality depending on scene present in ones' life and exposure of scenarios. Depending on level of the bio-factor the bad personality goes on building with visible features as depicted in Table 2. The worsening situations intensify levels of manias and the criminal goes on continuing his criminal activity and does not show any regret for it. Thus, regretful realization becomes an indication that the criminal is under strong influence of mania. Lot of options was brought about what to do to overcome such bad personalities for reverting back to normalcy. The results bought on these aspects are once again put under review and ratifications to learn meaningful lessons.

Confirmation of Bio Factor

This study substantiated by presenting Table 1 containing no of cases in varying category of genders. This is confirmation of identification of new bio-factor relating mental status and associated ailments.

Confirmation of Shock Deferring Growth

It came in the study that during time of birth both mother and child undergo unimaginable pains, which is a kind of shock. Cesarean delivery is one way for moderating painful process and saving child from natural shock process. In addition to this there could be any type of other unavoidable shocks, which defers growth and takes later on strong bio-factor magnification. The background of family and likely exposure bring severity of bad mental disordered personality. It is pertinent to bring here that new mania coming up in Indian society living abroad for producing fascinating sanskar child by *sanskar* in *garbh*, taking form of business. This study is bringing a new genetic advancement in human biology entirely different from the *garbh sanskar*. The bad personality develop due to either of afore mentioned shocks and family exposure appearing before the growing child from zero to hero [7].

Confirmation of Bad Mental Situation

There have been plenty cases of love jihad, where criminals commit variety of crimes viz murder, multiple injuring by repeated knife attack and crushing head through bricks beating. This and similar situations did prevail those days in media. Such situations come to notice in love jihad, live in relations and any other type of lifestyle living and indiscriminate shooting bun in the U.S. Such life course is a good example of dominance of mania in one or both gender bad personalities. In Aurveda science such ailment is classified as *vaat rog* reaching to extreme mania. It makes one to understand that marriage is social bond of two unknown personalities having different status of mind. Marriage brings some moderations and overcoming angularity in egoistic attitude. Thus, marriage makes a better balancing in the temperament than the situational live in relation pact. Supreme court in Washington gave a congruent judgment in a case of same sex marriage in live in relation [8]. This judgement favoured a business person not providing marriage celebration facilities. This study had already come to conclusion that same sex marriage is socially undesirable as it brings mental disorder during later part of life course.

There occur atrocities in worldly going on practice of living relation, which is rather a temporary self negotiated living relationship. Recently, a new law is promulgated in Japan that hence forth without consent making relationship will be taken as a crime and punishable offences [9]. The minimum age of consented making relationship is now 16 years raised from earlier age 13 years. For this consented making relationship age in Britain is 16 years, France 15 years, Germany and China 14 years, in Australia 17 years, Columbia, India and Russia 18 years and in Brazil 14 years. The minimum marriage age in Japan is

27 years and the country is worried with low birth rates to cope high future demand of working human power. Reduction of minimum age of marriage presently 27 years to 25 would bring better environment fulfilling human power need of Japan.

Cases Citation for Substantiation of Criminality

There had been plenty cases to cite the crime in live in relation irrespective of age, religion and modality. In all cases mania has been the dominant bio-factor. Media reports were plenty in numbers. There had been some impact of winter season, darkness and place of isolation on increase in crimes related to live in relation. This is genetic socio problem, but in police protection it stands as law and order, hence it is becoming beyond control and problem is seen with increasing trend.

Moderations in bad Personality by Marriage

Hindu marriage solemnizations comprise of different events and sessions, which becomes orientation for social binding and inducement of resilience for tolerance in two different attitudes, which do not come in any type of living relationship. Many countries have fixed minimum age of marriage, which becomes subject of debate, not on scientific fact basis, but on largely religion basis. Thus for celebrations and age related aspects. Scientific study gives a new scientific backing for favouring marriage over the live in relations. There have been legalization of same sex marriage in many countries, but as brought here the charm in life course get hampered and same sex marriage adversely become cause of bad personality manias, which is again a mental disorder building angularity. This scientific fact becomes basis for not allowing same sex marriage as there is no scope for manias moderations in future life course.

The bio-factor pH can be moderated by food and nutrition. Many social reformations such as moderation of angularity by marriage and enforcing regulatory reforms for overcoming mania as well were brought in the study. For instance whatever social preventive measures were taken in the study also came in Hon'ble Supreme Court, Washington judgment on June 30, 2023, over ruling judgement of high court of Colorado State [8] on same sex union. The same sex unions which lead to mental disorder at later part of life course. The present study brings a genetic justification favoring marriage which acts as moderator in angularities of unknown minds and denying same sex unions, which generate mental disorder at later age life course.

Conclusion

This study being highly relevant topic of global concern brought by new perfection in the original discovery of female-male genders theory and aberration in results with indication of ailments in the parents viz father and mother. The main bio-factor identified from substantiating cases was further expanded to cover possible features of bad personalities, which occur due to unavoidable shock during early stage of growth of child. With passing of time the bio factor growth picks up and takes strong, as per exposures one gets in the family. The bad personality development, the subject of this study, well understood that acquires vaat rog in Ayurveda. The mental disorders goes on increasing and affected one resort to cope with different situations viz baldness, keeping beard and mustache, laping forehead with *chandan*, maintaining long hair in form of juda, becoming sanyasi, finding its convenient life style. The worst form is mania, which turns a killer criminal of repeated actions, which also happen in indiscriminate shooting by gun. The study came up that marriage is a good way moderation of different

strong manias, making life course understandable and prosperous. Genetic socio punishments were suggested.
